the acid (carboxyl) and/or anhydride functional groups; by reaction with glycidyl methacrylate or vinyl or allyl alcohol or a hydroxyalkyl (meth)acrylate.

## 12. Cancelled.

- 13. (Original) The composition of Claim 9, wherein the reactive functional groups of the microparticles are carboxylic acid and/or anhydride functional groups in the presence of (meth)acrylate and/or allyl and/or vinyl functional groups.
- 14. (Original) The composition of Claim 1, wherein the thermosetting composition comprises:
- a) at least one unsaturated polyester and/or at least one unsaturated polyester modified by a poly-isocyanate and/or at least one vinyl ester,
- at least one copolymerizable comonomer carrying at least one α,β-ethylenic unsaturation chosen from vinylaromatic and/or (meth)acrylic and/or allyl monomers,
- c) optionally at least one second monomer carrying at least two reactive functional groups, one of which can polymerize by the radical route and the other by a condensation reaction,
- d) 0.5-50% and preferably from 5 to 25% by weight of reactive crosslinked microparticles of Claim 1.
- 15. (Original) The composition as claimed in Claim 14, wherein said microparticles carry at least one (meth)acrylate or hydrogen maleate functional group.
- 16. (Original) The composition as claimed in Claim 15, wherein said microparticles can be obtained by a first polymerization stage starting from:
- 10-40 mol% of Cardura E10 (meth)acrylate,
- ii) 10-75 mol% of butyl and/or tert-butyl and/or 2-ethylhexyl and/or 2-(2-ethoxyethoxy)ethyl (meth)acrylate and of styrene, with a molar ratio of styrene to (meth)acrylic monomers varying from 0 to 0.2,

4

iii) 5-40 mol% of hydroxyethyl (meth)acrylate, maleic anhydride, (meth)acrylic acid or glycidyl methacrylate,

W. H. D.

iv) 2-10 mol% of hexanediol and/or propylene glycol and/or neopentyl glycol and/or trimethylolpropane (meth)acrylate,

with the sum of the molar percentages of all these constituents i)+ii)+iii)+iv) being equal to 100, followed by a second stage of at least partial chemical modification of the starting reactive functional groups according to:

- the starting hydroxyl functional groups to hydrogen maleates by reaction with maleic anhydride and/or to (meth)acrylates by reaction with (meth)acrylic acid,
- the starting epoxy functional groups to (meth)acrylates by reaction with (meth)acrylic acid.
- the acid functional groups to methacrylate by reaction with glycidyl methacrylate,
- the anhydride functional groups to (meth)acrylates and residual acids by reaction with a hydroxyethyl or hydroxypropyl (meth) acrylate or with glycidyl methacrylate.
- 17. (Original) A coating comprising the composition of Claim 1.
- 18. (Original) The coating of Claim 17, wherein said coatings are protective coatings for electrical or electronic components, items or devices.
- 19. (Previously amended) The thermosetting composition of Claim 1 applied to molded items and of items made of composite materials.
- 20. (Original) A thermoset matrix obtained from the thermosetting composition of Claim 1.
- 21. (Original) A protective coating, molded item or item made of composite materials obtained from the thermosetting composition of Claim 1.
